SINGLE Temperiertechnik GmbH continues their push towards international market presence

## **SINGLE sets up new US subsidiary and moves into the North American market with enhanced product portfolio**

**SINGLE Temperiertechnik GmbH of Hochdorf/Germany has stepped up its activities in the US. The new subsidiary SINGLE Temperature Controls, Inc. with headquarters in Charlotte, North Carolina, has consolidated the company's presence on the North American continent. As one of the leading European manufacturers of high-performance temperature control systems, SINGLE has advanced its level of involvement in the US market from operating a prominent sales agency to setting up its very own subsidiary. In addition to this heightened level of market development, SINGLE has also enhanced its product portfolio for North America.**

"The new US branch is a new milestone of our progression towards internationalization," Karlheinz Gruber, CEO of SINGLE Temperiertechnik, explains. "We have been successfully supplying our customers in the US market with temperature-control systems, heat transfer units and chillers." SINGLE systems are used by major processors, by application technology departments of raw material manufacturers as well as for many production units that were developed and installed by European and US machine manufacturers and system integrators.

Spearheaded by Michael Bloomhuff, the new national sales manager for the USA, the new SINGLE subsidiary will consolidate existing customer contacts and develop new business opportunities. Bloomhuff has a degree in machine engineering and many years of experience in the plastics industry. "Having worked in pump construction and sales as well as in the supply of blow molding equipment, Bloomhuff is the perfect candidate for this new job," Karlheinz Gruber explains. Primary North American target groups for SINGLE Temperature Controls Inc. are plastics processors, but the company is also catering to the die casting, chemical, pharmaceutical and food industries as well as to customers in test and semi-conductor engineering.

In addition to meeting the US standard requirements, SINGLE has identified sales potential in the North American market for high-temperature water pressure systems and high-performance special temperature control systems such as STWS alternating temperature systems for injection molding applications with exacting surface quality and dimensional tolerance requirements as well as for very short cycle times, which is called for in automotive engineering applications, for example.

With the new US subsidiary, SINGLE has strategically enhanced its global sales and service network. In addition to the new facility in Charlotte, the company is now represented by more than thirty agencies world-wide, providing personal

consultancy, fast spare parts supply services and local technical support. Up until now, SINGLE was represented in the US by injection molding machine manufacturer Krauss Maffei Corp. of Florence, Kentucky.

### **SINGLE in Profile**

SINGLE has been developing, producing and selling high-performance temperature control systems for more than 40 years. The company's product portfolio consists of water and oil-operated, high-quality temperature control units, heat transfer units, water-to-water chillers, as well as customized solutions. SINGLE uses only high-quality components and materials. Long-standing customers testify to the ease-of-use and the reliable operation of SINGLE units even under a high workload.

In addition to plastics processors and manufacturers of plastics processing machines, SINGLE caters to customers in the chemical and pharmaceutical industry as well as to the metal plating industry, the food production segment and many more.

The company works with an international network of sales and service points. Services and after-sales support on all temperature-control related problems, commissioning, on- and off-site training complete SINGLE's portfolio. SINGLE is certified to EN ISO 9001:200-12, has technology and manufacturer certifications that meet the European Pressure Equipment Directive (PED) and complies with standards such as UL and regional directives to CSA and GOST.

The company, which employs about 120 people, has been a member of Looser Holding AG of Arbon/Switzerland since 2006.
