

Press Release
25 April 2012

Specialist for temperature control and cooling systems expands production floor and creates new jobs

SINGLE Temperiertechnik GmbH expands production capacity

SINGLE Temperiertechnik GmbH of Hochdorf/Germany has now started operations at its new site and has expanded its production capacity. The well-established manufacturer of temperature control and cooling systems has added a new production hall and offices in close vicinity to the company's headquarters in Hochdorf near Stuttgart. The company is also looking for new personnel.

Additional 1,000 sqm of production space and 150 sqm of office space have been created in the vicinity of the company's headquarters in Hochdorf. Thanks to the new production and storage hall, production and freight management can now be handled separately, which avoids shortage of space during busy periods and optimises workflows in both production and logistics. The results of business excellence projects have identified additional optimisation potential, which can now be strategically implemented thanks to the expanded floor space.

The addition of floor space and strategic expansion are the cornerstones for more growth. SINGLE currently employs 120 people at its headquarters in Hochdorf and plans to increase its personnel by up to 25% in the short to medium term.

The new site mainly handles the company's logistics-related activities. A flexible approach to dealing with increasing orders and peak situations is at the top of the agenda. The expansion of floor space and a large workforce will distribute the workload which has so far been handled by staff at the company's headquarters and will therefore optimise workflows. Relocating all logistics-related activities has freed up floor space at the headquarters which can now be integrated into the existing production environment quickly and easily. For SINGLE, these structural changes will have an immediate positive effect on the spatial situation and therefore open up various opportunities for enhancing the overall business operation. The objective of the new measures is to increase the company's overall efficiency. "We expect these improvements to start having positive repercussions for our personnel and especially for customers during the current quarter," says Karlheinz Gruber, Managing Director of SINGLE Temperiertechnik GmbH.

Additional SINGLE site in Hochdorf/Germany

SINGLE in profile

SINGLE has been developing, producing and selling high-performance temperature control systems for more than forty years. The company's product portfolio consists of water and oil-operated, high-quality temperature control systems, cooling technology as well as tailor-made and customised solutions. SINGLE uses only top-quality components and materials. Long-standing customers testify to the ease-of-use and the reliable operation of SINGLE systems even under a high workload.

SINGLE offers a complete standard range of oil- and pressurised-water operated systems with maximum heating capacities of 144 kW and temperatures of between -40°C and +350°C. In addition to this, SINGLE provides extensive engineering and caters to all phases of the process chain with systems from one source – from initial product conception, design, production and final assembly of temperature control technology systems right through to the installation's initial operation.

In addition to plastics processors and manufacturers of plastics processing machines, SINGLE caters to customers in the die-casting, chemical and pharmaceutical industry as well as to the metal plating industry, the food production segment and is used for test bench technology and many more applications.

A network of regional sales partners and service points as well as subsidiaries in the US and China are the cornerstones of SINGLE's international presence. Services and after-sales support on all temperature-control related matters, commissioning and on- and off-site training complete SINGLE's portfolio. SINGLE is certified to EN ISO 9001, has technology and manufacturer certifications that meet the European Pressure Equipment Directive (PED) and complies with standards such as UL and regional directives to CSA and GOST.

The company, which employs about 120 people at its facility in Hochdorf near Stuttgart/Germany, has been a member of Looser Holding AG of Arbon/Switzerland since 2006.
